

EDGE™ Distribution System: Pre-Engineered to Go Faster

A New Path to Speed & Sustainability

Our pre-engineered data center solutions can help customers install faster, reduce packaging, and minimize risk:

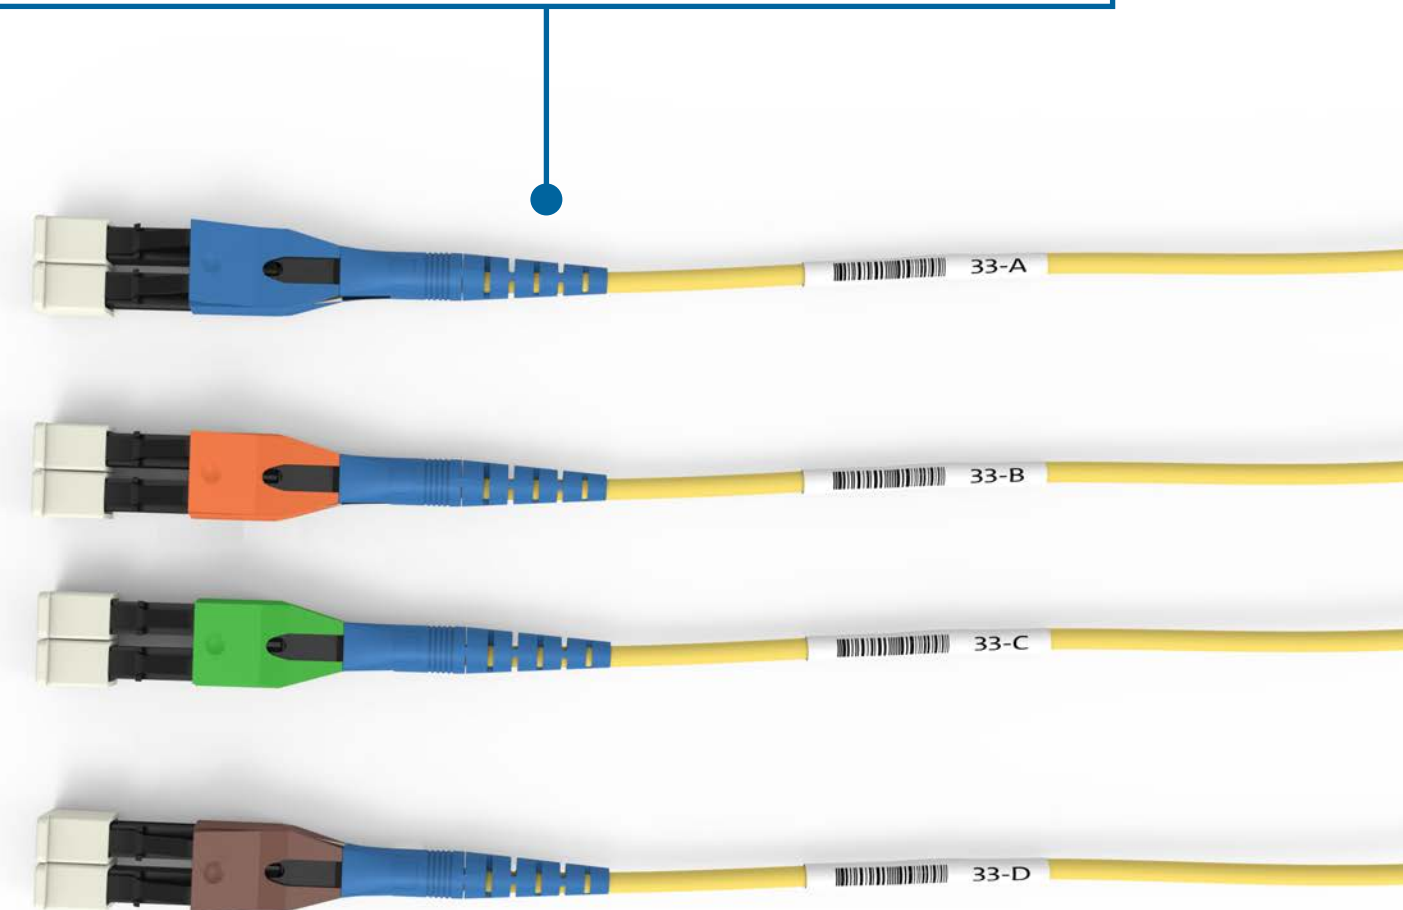

- **Pre-Engineered for Fast, Easy Installation** – Compared to a traditional patch cord deployment, EDGE DS is one assembly, one SKU, and one box, installed in 45 minutes vs. 3 hours.*
- **Personalized to Your Exact Needs** – Custom fiber count, access points, and dimensions designed for the customer's specific data center design. Plus custom labeling and color coding simplify installation.
- **Minimize Risk** – Simplified installation means less ladder time, and less skilled labor needs, reducing the risk associated with server row cable deployments.

A **point-to-multi-point** solution for **server row cabling** needs.

Feeder Connectors at the end-of-row Goal Post/IDF.

Custom Labeling and Color Coding in the factory minimizes field labor requirements.

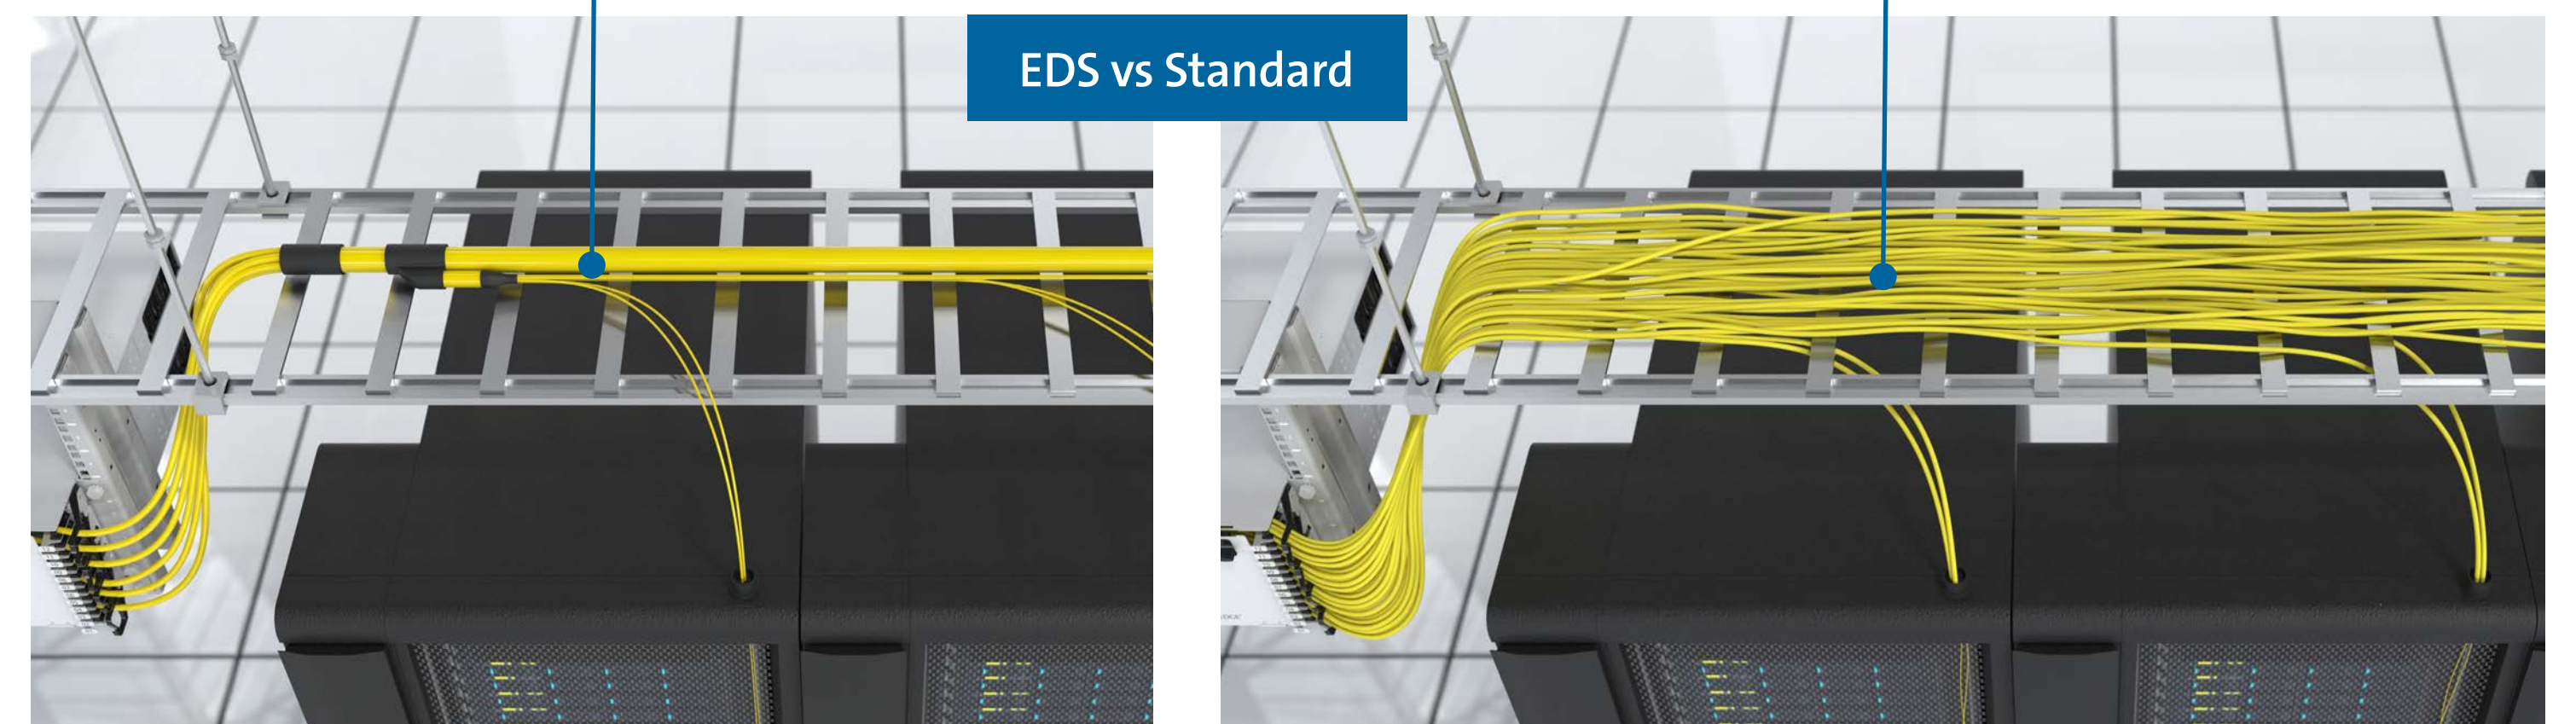

Access Points along the assembly personalized to your data center design.

Drop Legs and Connectors provide needed connectivity to each cabinet.

A **single assembly/SKU** provides up to 75% faster installation.

More space: Reduced tray congestion, simplified inventory management, and less packaging

REDUCE SERVER ROW CABLING TIME BY UP TO **75%***

*Base case: Row of 18 server cabinets with four fibers provided to each cabinet
