

# Legrand Trunks

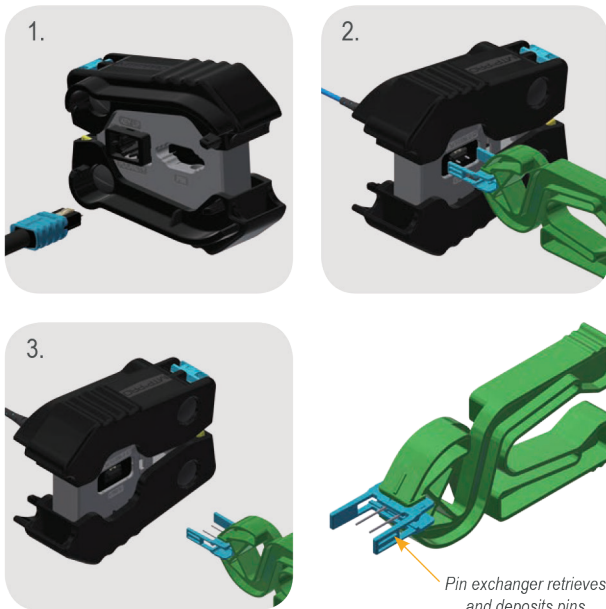

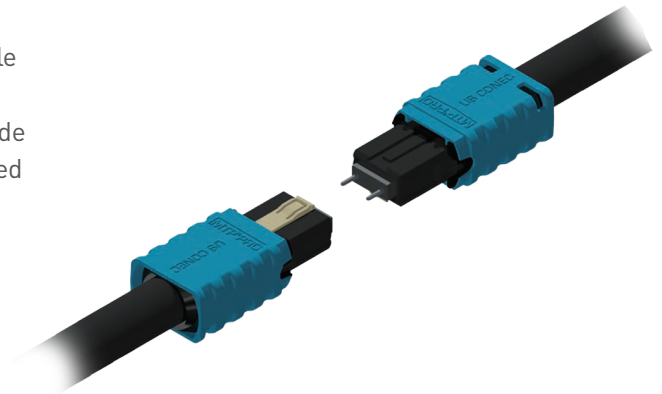

Featuring US Conec's MTP® PRO

**Legrand trunks** featuring US Conec's MTP® PRO are a simple and dependable solution that enable safe, field-friendly configurations every time. The system is engineered to provide time and cost savings while reducing damage risks associated with pin configuration.

## Simplified Pin Changes

The pin change process utilizes the Pin Change Tool and the Pin Exchanger for an easy-to-use, failsafe method of field configuration.

### Benefits

- Simple field configurability saves time and effort
- Eliminates housing removal and pin handling
- Factory color-coded pin clamps and exchanger allow for easy, immediate identification
- Pin exchange system reduces risk of damages and eradicates costly mistakes
- Minimizes amount of pre-planning needed
- Allows for less cable inventory

## Single Step Polarity Change

Legrand Trunks featuring the MTP®PRO provide a quick, convenient means to field configure. Simply insert the connector into the polarity change port built into the Pin Change Tool to reverse the keying configuration.

Featuring US Conec's MTP® PRO

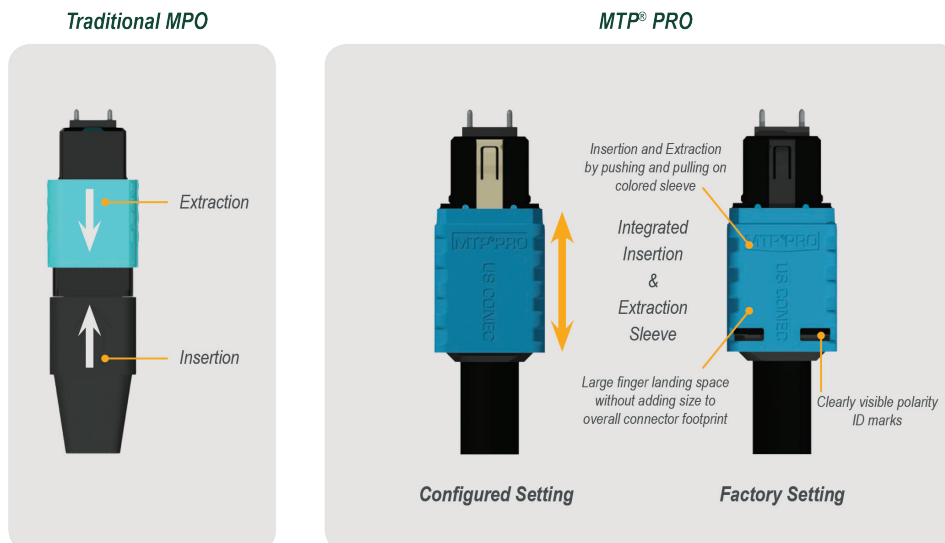

## Cleaner and Greener Optimization

- Dust cap extends from the push-pull sleeve to the end of the connector to provide protection from debris to ensure the optimum performance measures
- Non-debris generating materials maintain integrity use after use
- No mated state stresses results in no retention degradation as time passes
- RoHS and REACH compliant
- Environment and people friendly

## Simple Insertion and Extraction

- Push-Pull Method: Push on the sleeve for insertion; pull on the sleeve for extraction
- Minimized insertion/extraction force application
- Increased sleeve length for easier handling
- Polarity ID Markings indicate the factory key setting
- Mateable with standard MPO adapter and plugs
