

# Utelogy—Enabling the Intelligent Campus

Remote monitoring and management, support, analytics and control for teaching and meeting spaces.

Teaching spaces are no longer open and shut rooms. Today, anywhere with a display and space for seating can be a place for learning, teaching, and working. With the growth in the number of these spaces and the technology being integrated into teaching and collaboration spaces, it has become even more challenging to cost-effectively manage these solutions.

## Liberate Your Campus

Utelogy is a revolutionary approach to building new workspaces and monitoring and managing these spaces efficiently. With its enterprise-grade capabilities, the Utelogy platform delivers a dashboard and reporting environment designed with scale and the future in mind. Organizations can build and test rooms as they're deployed and gather and consolidate data from across the campus to gain actionable intelligence for real-time decisions.

Platforms that can accommodate aggressive room and asset growth.

Solution that will enhance the user experience with current & legacy systems

Ability to monitor systems and devices efficiently with automation

Asset & Inventory Management

Usage and performance metrics to intelligently plan for the future

Add Service Level Agreements (SLAs) to measure success.

Deliver teaching space insights to maximize current investments and intelligently plan for the future.

“Most fixes are down to 2 or 3 minutes and if we have a physical fix, it’s 5 to 8 minutes of downtime, and that’s dramatically improved the experience. The solution gave us the freedom to expand, make changes, and manage the systems with ease”

Rich Avila,  
Director of Classroom Technology, California State University, East Bay

## The Utelogy Advantage:

Utelogy delivers strategic benefits so you don't have to abandon your existing technology investment and have flexibility to make choices in the future.

- Single platform for control, automation, monitoring and management
- Open architecture with support for standard web technologies including Telnet, SSH, HTTP(S), SNMP, ICMP
- Hardware agnostic with the ability to integrate new devices and new protocols
- Simple configuration as opposed to complex programming
- Room and device analytics
- Ability to automate preventive maintenance
- Hardware and asset management

## A Revolutionary Approach to Teaching Spaces

Utelogy delivers the following features and benefits to Liberate Your Campus.

**Lower Up-Front Costs** – Utelogy's approach to AV eliminates the need for large up-front hardware expenditures because it uses existing network infrastructure. It allows for easy scaling and the opportunity for integration of new features as they are released.

**Fast Implementation** – Utelogy connects to the existing campus IT network and uses the same interfaces the IT team already knows, so implementation is fast and simple.

**On-Demand Scalability** – Utelogy enables 'just-in-time AV', allowing deployment of technology when and where it's needed. Adding or replacing individual components or entire buildings is easy, quick and cost-efficient.

**Reduced Support Costs** – Utelogy enables remote configuration, assessment and trouble-shooting to enable organizations to support more rooms with greater efficiency.

**Customizable User-Interface** – Utelogy's UI is designed with Utelogy Visual Framework which allows users to take standard, 'out of the box' components, or with Component API and Theming Guide to develop and customize the User-Interface.

**U-Access** – The integration with Active Directory allows organizations to authenticate users and to evaluate access rules to determine which users can use which rooms.

**Data-Enabled Decision Making** – Utelogy delivers metrics, analytics and other insights that drive management decisions, including return on investment, cost of ownership, usage, and operational health.

**The Right Technology Mix** – Utelogy allows rooms to be modified quickly, enabling cost-effective concept testing and fast, affordable implementation of new component mixes as educational needs and technologies advance.

**Third-Party Integrations** – Integrate with a number of UCC and video conferencing applications for a seamless AV experience. Integrations include Cisco Telepresence Touch, Zoom Room integrations, and USB Device Monitoring.

**Utelogy APIs** – Utelogy REST API is available for integration to other enterprise systems including ERP and data connectors for analytics insights using BI tools like Microsoft BI or Tableau.

With its smaller in-room footprint and larger back-end presence, the Utelogy platform blends the real and the remote for optimal visibility and management of your entire campus.
