

## The Anixter Difference

Effective cable management solutions reduce on-site preparation time, which allows skilled laborers to focus solely on installation and testing. With a variety of cost-cutting options to manage your cable installation needs, Anixter's cable management solutions can shrink labor costs and storage space, minimize product handling, and reduce cable waste, theft and damage for a smoother and more cost-effective installation.

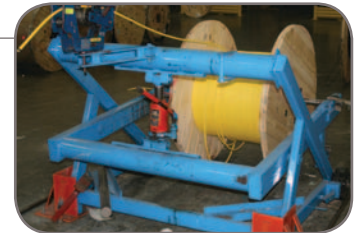

## Our Solutions

Anixter offers a suite of solutions that can be tailored to meet your requirements.

### Cut to Circuit Length and Tagging

Anixter can cut cable to custom lengths to eliminate the cost and time of cutting on site and having leftover cable on master reels. In addition, we can tag each reel with your circuit identification. You can schedule the reels to arrive just in time at your job site, which reduces storage space, theft and handling.

- Eliminates cable waste
- Eliminates cutting on site
- Minimizes labor and tooling costs
- Reduces on-site storage and handling

### No-Lube Cable

Anixter stocks no-lube cables that makes installing cable faster, cleaner, safer and more cost-effective.

- Faster installation time
- No slipping on spilled lubricant
- No messy clean up
- Less risk of injury from applying lube

### Phase Taping

When cutting to circuit length, Anixter can phase tape the cable ends for easy cable identification.

- Ends of cables marked
- Easy cable identification

### Colored Feeders\*

Anixter stocks colored feeders in THHN, which makes for easy cable identification at the cable ends and junction boxes within a pull.

- Makes cable identification easy
- Identifies cable in junction boxes
- Comes in no-lube construction

\*Solutions are available at select Anixter distribution centers. For more information, contact your local Anixter sales representative or call 1.800.ANIXTER.

# Cable Management Solutions

## SpeedPull®

SpeedPull bundles and binds together different types of wire or cable, including color-coded or numbered copper, fiber and electronic conductors, into one compact, flexible, multiconductor cable.

- Improves speed of installation and productivity
- Reduces scrap material
- Simplifies conductor identification

## PARAPULL Reels\*

PARAPULL is a custom Anixter-constructed reel that has multiple chambers to load cable legs. The separate chambers prevent cable legs from binding with each other, which allows for easy pulls and setup time. The wood construction lowers the cost of metal chamber reels, eliminating the need for deposits.

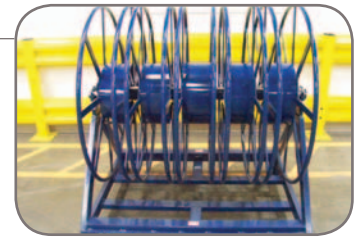

- Easy set up
- Smoother cable pulling
- Easier to locate all legs of circuit on job site
- Returnable to eliminate disposal costs

## Spinning WEMCO Reels\*

Spinning WEMCO reels have independently spinning chambers that allow cables of different diameters to be pulled simultaneously. Ground wires commonly are smaller in size and spinning WEMCOs allow for the grounds to be pulled off the same reel as the circuit legs. Spinning WEMCOs are also shipped on their own cable caddy, which allows for easy setup at the job site.

- Accommodates up to five cables of different diameters
- Allows for simultaneous pulls
- Facilitates easy set up with cable caddy
- Eliminates disposal costs with returnable caddy

## Installed Pulling Eyes\*

Anixter can install pulling lugs to your cable legs prior to shipment, which eliminates the costly task of on-site installation. Anixter uses lugs that crimp directly to the conductor, which reduces cable waste associated with traditional pulling eyes. The lugs connect to pulling lanyards that are easy to attach and can be used for hundreds of pulls.

- Lowers installation cost
- Reduces cable waste
- Minimizes on site labor costs
- Reduces tooling costs
