

Project Spotlight: Sustainability Projects That Deliver ROI

Challenges:

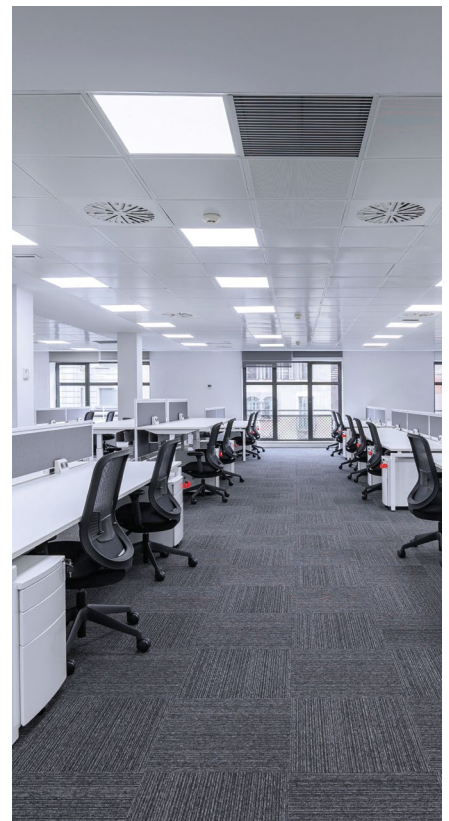

A media and technology company wanted to update its Menlo Park, California campus with the latest in energy-efficient LED lighting and advanced wireless controls. Wesco Anixter's energy solutions team was awarded the request for proposal (RFP) after designing and presenting a solution that would enable the company to maximise annual energy savings and qualify them for utility rebate incentives.

Solution:

LED retrofit kits were used to upgrade and replace existing interior and exterior lighting fixtures across the campus. A wireless controls solution was integrated into the existing facilities management system to enable remote access for real-time changes and energy-saving modifications.

Results:

- Total annual savings: \$934,435
- Annual lighting energy savings: \$844,012
- Annual lamp maintenance savings: \$57,252
- Annual air conditioning savings: \$33,171
- Qualified utility incentive: \$746,460
- Project payback period: 1.12 years
- Return on investment: 89%

Sustainability goals and lowering operating expenses are at the forefront of the global agenda.

Wesco Anixter is uniquely positioned to provide the critical infrastructure knowhow and solutions that enable the technologies of tomorrow.

We can assist with your energy optimisation plans. Contact us for details: Wesco.com/energy-emea.
